

Install and Configure Apache

- 1 Overview
- 2 Installing Apache
- 3 Creating Your Own Website
- 4 Setting up the VirtualHost Configuration File
- 5 Activating VirtualHost file

1. Overview

Apache is an open source web server that's available for Linux servers free of charge.

In this tutorial we'll be going through the steps of setting up an Apache server.

What you'll learn

- How to set up Apache
- Some basic Apache configuration

What you'll need

- Ubuntu Server 16.04 LTS
- Secure Shell (SSH) access to your server
- Basic Linux command line knowledge

Got everything ready? Let's move on to the next step!
